

ThanksChain

Send on-chain thank-you cards with a small SOL tip attached

The Problem & Our Solution

Crypto feels technical for newcomers. ThanksChain makes sending value and NFTs as easy as sending a thank-you card.

- Sending crypto and minting NFTs still feels technical and intimidating for beginners.
- ThanksChain lets anyone mint and send a thank-you card NFT with a tip in under a minute.
- One-click Phantom wallet connect removes setup friction.
- Fixed small tip amounts (0.01/0.05 SOL) remove decision paralysis.
- Recipient gets an NFT keepsake and real SOL value in one simple action.

How It Works

A simple flow: connect, choose, write, send. Everything mints and settles on Solana in seconds.

- User flow: connect Phantom wallet, pick a card design, write a short message, attach optional tip.
- One click mints the card as an NFT via Metaplex, sent directly to the recipient's wallet.
- On-chain: the NFT mint and SOL tip transfer happen together in the same user action.
- Architecture: Next.js frontend, Solana Web3.js, Phantom Wallet Adapter, Metaplex NFT standard.
- Recipient opens a simple gallery page to view all thank-you cards they've received.

Built with

Solana, Next.js, Solana Web3.js,
Metaplex NFT standard, Phantom Wallet
Adapter, Solana Devnet

Why Now & What's Next

Solana's speed and low fees make micro-tipping and NFT gifting practical for everyday casual use.

- Low fees and fast finality make small tips and NFT mints viable, unlike expensive chains.
- Built and tested on Solana Devnet, ready to extend toward mainnet.
- Roadmap: mainnet support with real SOL amounts.
- Roadmap: custom card designs and templates created by users.
- Roadmap: social sharing so cards can be posted and discovered publicly.
